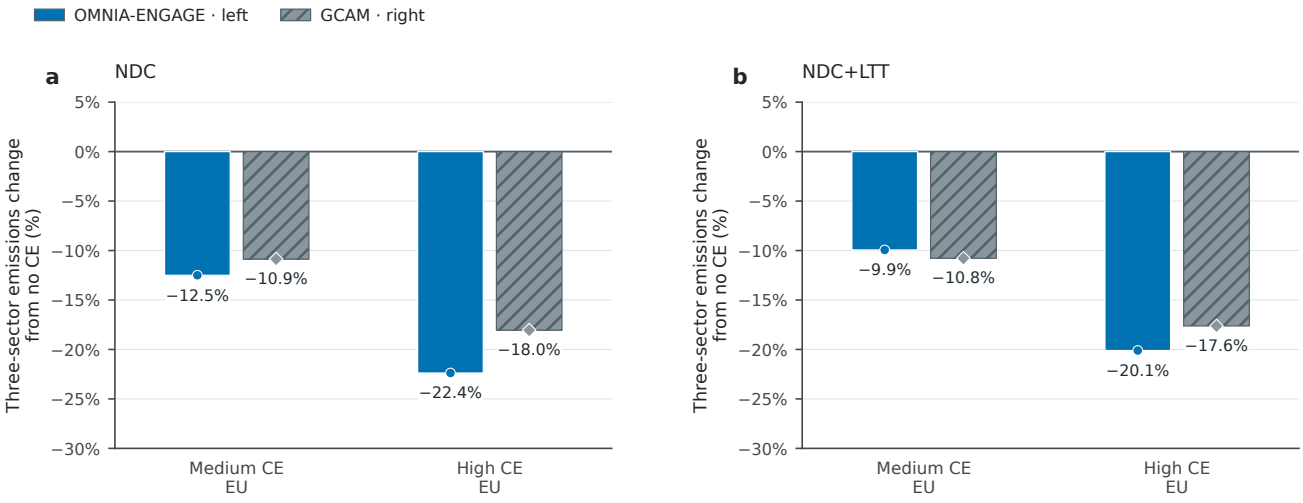
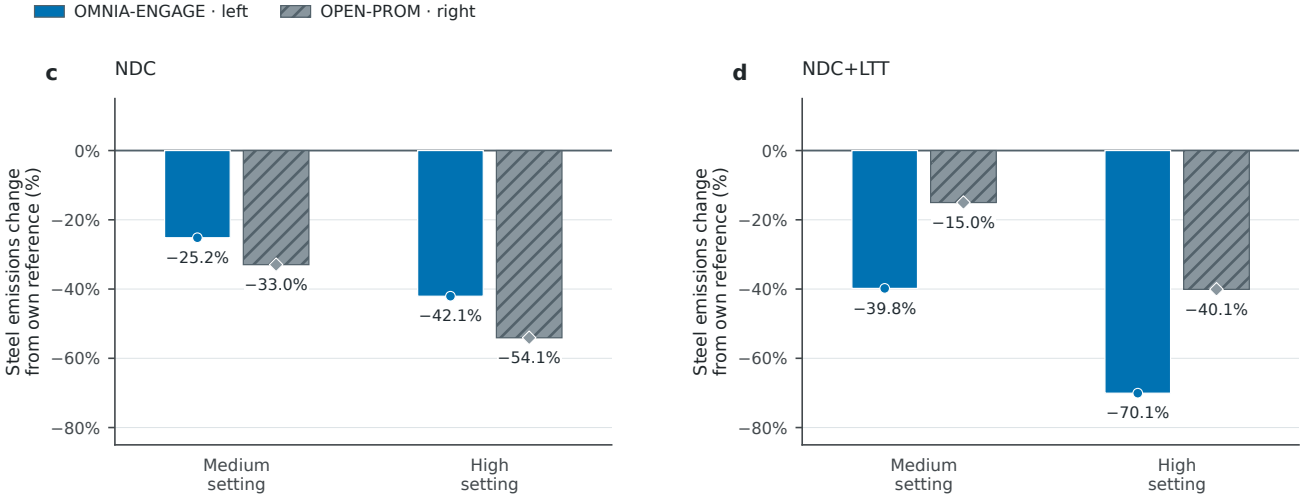
Circular economy effects on reported emissions

2050 | changes from each model's own same-year no-CE/reference case

Europe · cement, steel + aluminium emissions · EU-only CE in both models



Global steel · OMNIA CE in EU+ · OPEN-PROM global



Top: OMNIA sector GHG; GCAM sector CO_2 (cement energy + processes; steel/aluminium energy CO_2).

Bottom: OMNIA reported steel GHG; OPEN-PROM steel energy-related CO_2. Gas and process boundaries differ.

Global steel: OMNIA CE in EU+; OPEN-PROM intervention area unspecified. Policy equivalence is unconfirmed.

Reference: each model's own 2050 case. Percentage scales match within rows; inventories differ between rows.

OMNIA LTT aluminium blanks use provisional zeros. Capture is not subtracted again; unavailable responses remain gaps.
