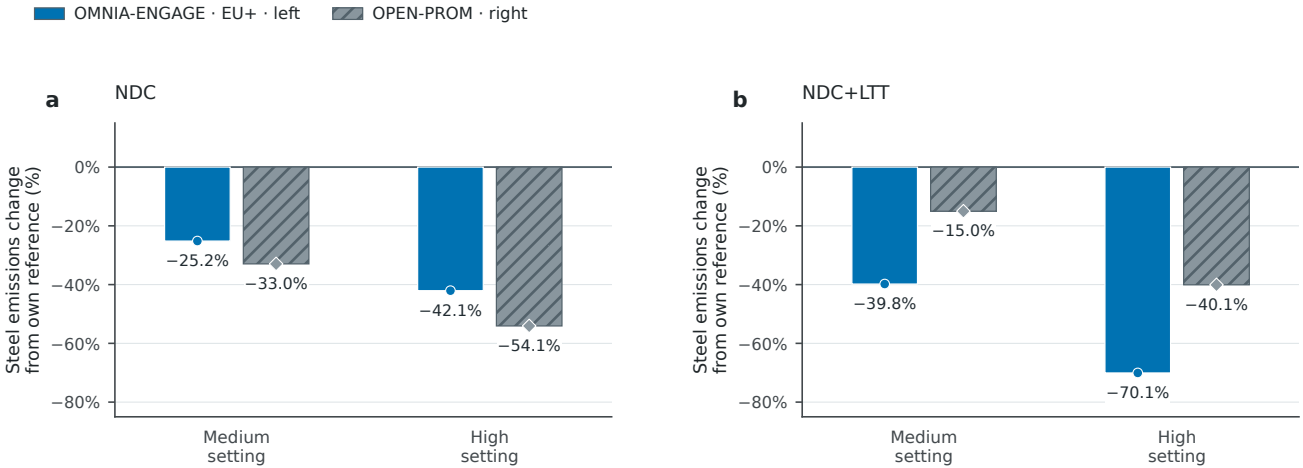
Global steel emissions: response to medium/high settings

2050 | OMNIA CE in EU+ | change from each model's own pathway reference



OMNIA: reported steel GHG; OPEN-PROM: energy-related steel CO_2. Gas/process boundaries differ.

Each model uses its own 2050 pathway reference; capture is not subtracted again.

OMNIA CE in EU+ (17 regions); OPEN-PROM intervention and adoption geography are undocumented.

OMNIA missing activity = zero (provisional). Medium/high labels do not establish equivalent policies.
