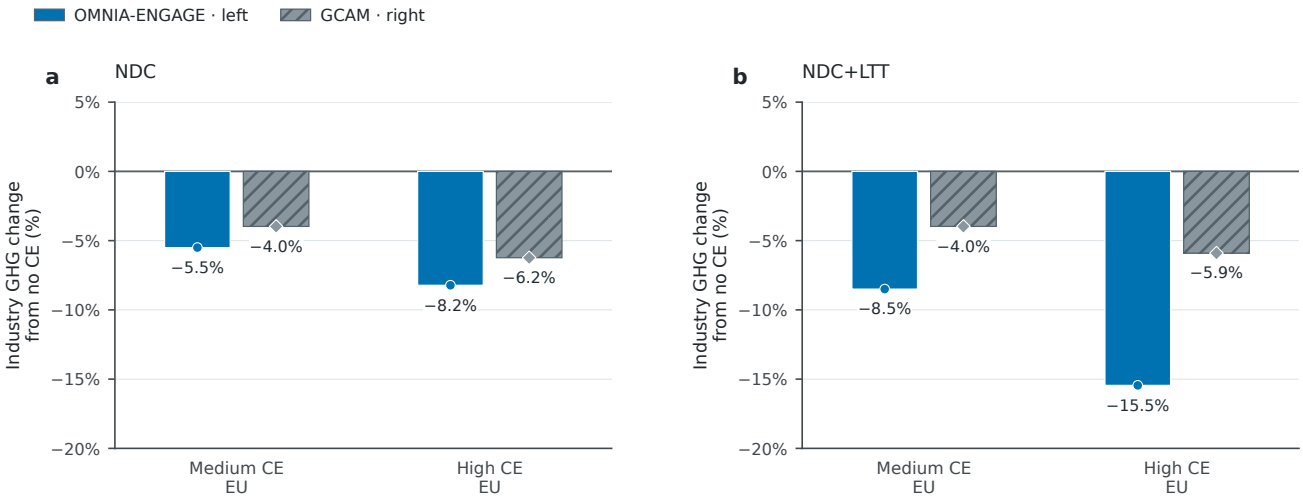
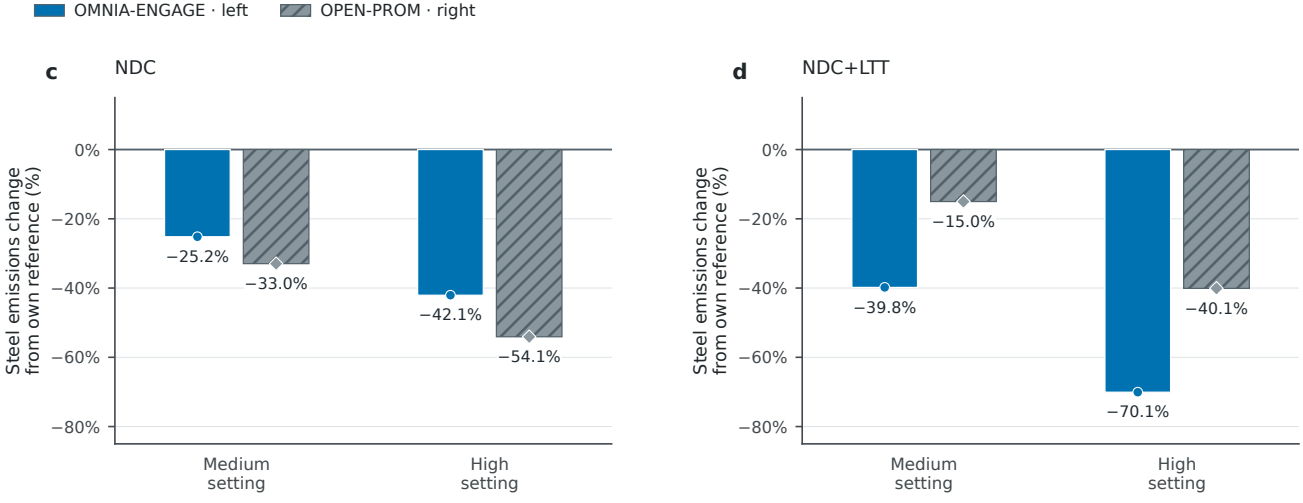
Circular economy effects on reported emissions

2050 | changes from each model's own same-year no-CE/reference case

Europe · reported all-industry GHG · EU-only CE in both models



Global steel · OMNIA CE in EU+ · OPEN-PROM global



Top: OMNIA reported all-industry GHG; GCAM industry energy-demand + industrial-process Kyoto gases.

Bottom: OMNIA reported steel GHG; OPEN-PROM steel energy-related CO_2. Gas and process boundaries differ.

Global steel: OMNIA CE in EU+; OPEN-PROM intervention area unspecified. Policy equivalence is unconfirmed.

Reference: each model's own 2050 case. Percentage scales match within rows; inventories differ between rows.

Capture is not subtracted again. Missing inputs retain the source treatment; unavailable responses remain gaps.
